

BeReal

Summary (Evgenii Salnikov)

BeReal is a social media application designed with a unique approach to content sharing, emphasizing authenticity and spontaneity. Unlike other social platforms, BeReal does not focus on curated content or follower counts. Here's a detailed summary of its features and functioning:

Concept and User Experience

BeReal notifies users once a day at a random time to capture and share a photo or a video. This feature encourages users to share their current activity or surroundings, promoting genuine and unfiltered content.

Users have control over who can see their posts, ensuring a secure and private experience.

The app uses both the front and back cameras of the phone simultaneously, offering a dual perspective in every post. This allows followers to see the user's face and their environment at the same time.

Furthermore, BeReal does not support filters or photo editing tools, maintaining the authenticity of the shared moments. The app encourages connections with real-life friends rather than amassing followers. This fosters a more intimate and personal social networking experience.

Available Features

Daily Photo Sharing

The core feature of BeReal is its once-a-day notification prompting users to share a photo within two minutes. This creates a sense of excitement and spontaneity. The two-minute window helps ensure that the content is candid and real-time, reducing the likelihood of staged or curated posts.

Dual Camera Use

BeReal utilizes both the front and back cameras of the phone simultaneously, capturing both the user's face and their environment. This dual perspective offers a more comprehensive glimpse into users' lives.

RealMojis

Instead of standard emojis, BeReal uses RealMojis for reactions. Users take a selfie to react to their friends' posts, adding a personal and authentic touch to interactions.

Commenting

Users can comment on each other's posts, fostering communication and engagement within the app. The commenting system is straightforward and user-friendly.

Discovery Mode

While the main focus is on friends, BeReal also offers a Discovery mode, where users can explore posts from around the world. This feature broadens the scope of interaction and exposes users to diverse lifestyles and cultures.

Privacy Settings

BeReal provides options to control who can see your posts, whether just your friends or the broader BeReal community. This helps maintain a level of privacy and security.

User Interface (UI)

Simplicity and Ease of Use

BeReal's UI is notably minimalist, focusing on its primary function of spontaneous photo sharing. The home screen typically displays the latest BeReal post from friends, with easy navigation to view past posts.

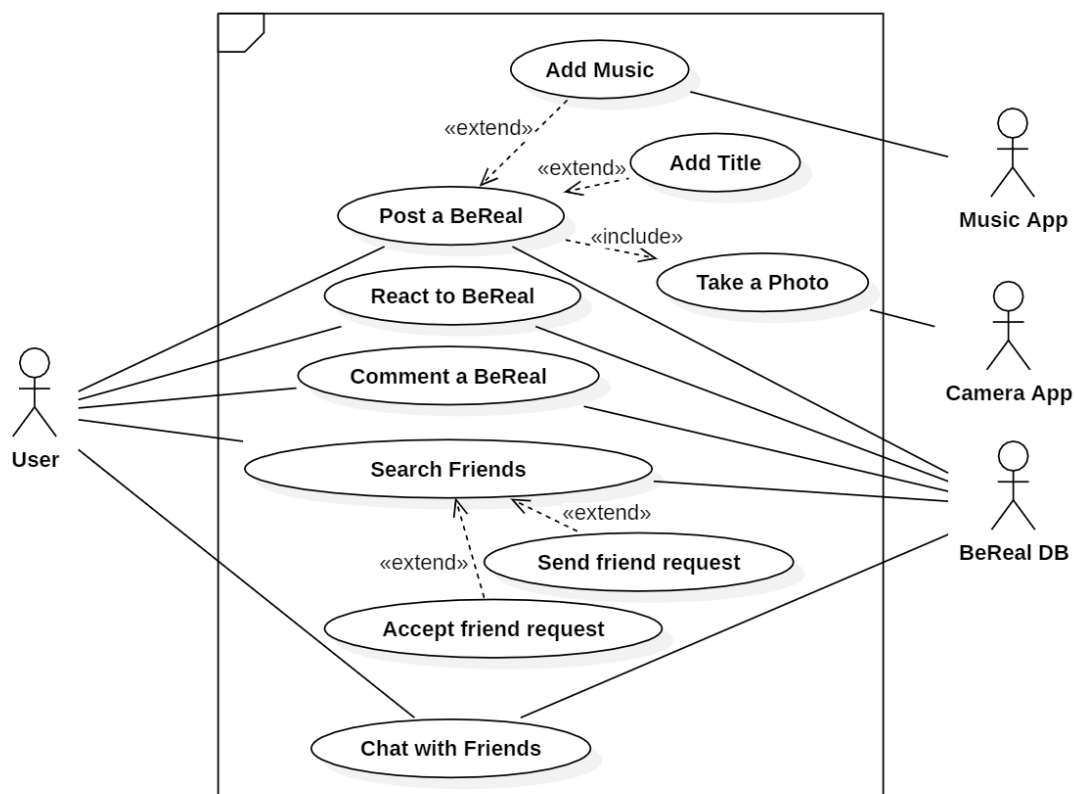

Intuitive Navigation

The app has a straightforward layout, with minimal buttons and options. This helps in reducing clutter and enhancing user focus on content creation and interaction. Navigating through friends' posts, commenting, and reacting are all intuitive processes, requiring minimal taps or swipes.

Visual Design

The visual design of BeReal is clean and unobtrusive, emphasizing content over flashy graphics or animations. This approach aligns with the app's ethos of authenticity.

Use Case diagram (Evgenii Salnikov)

Typical Scenarios (Evgenii Salnikov)

Number	1
Name	Post a BeReal
Summary	User posts a BeReal
Priority	5
Preconditions	User has launched an app and has not posted a BeReal yet
Postconditions	User has posted a BeReal
Primary Actor(s)	User
Secondary Actor(s)	BeReal DB

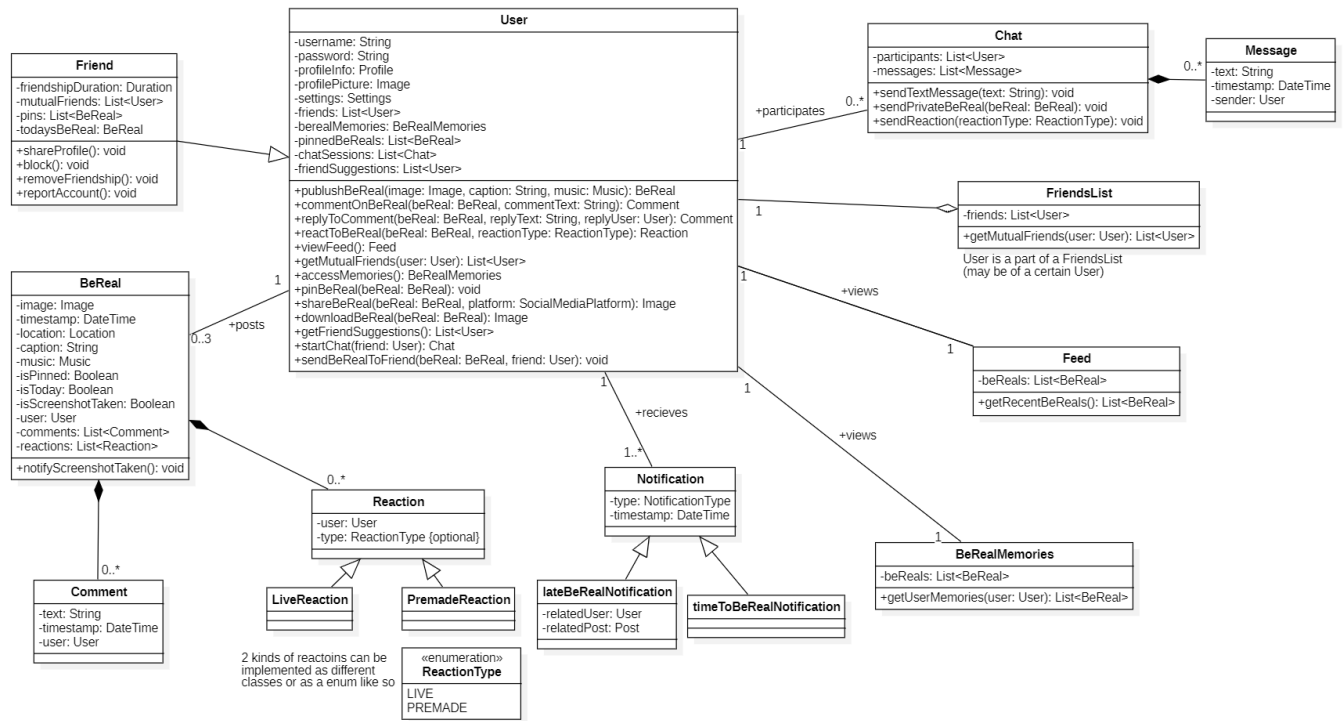

Number	2
Name	React to BeReal
Summary	User reacts to a BeReal
Priority	3
Preconditions	User has posted a BeReal
Postconditions	User has reacted to a BeReal
Primary Actor(s)	User
Secondary Actor(s)	BeReal DB

Number	3
Name	Comment a BeReal
Summary	User comments a BeReal
Priority	3
Preconditions	User has posted a BeReal
Postconditions	User has commented a BeReal
Primary Actor(s)	User
Secondary Actor(s)	BeReal DB

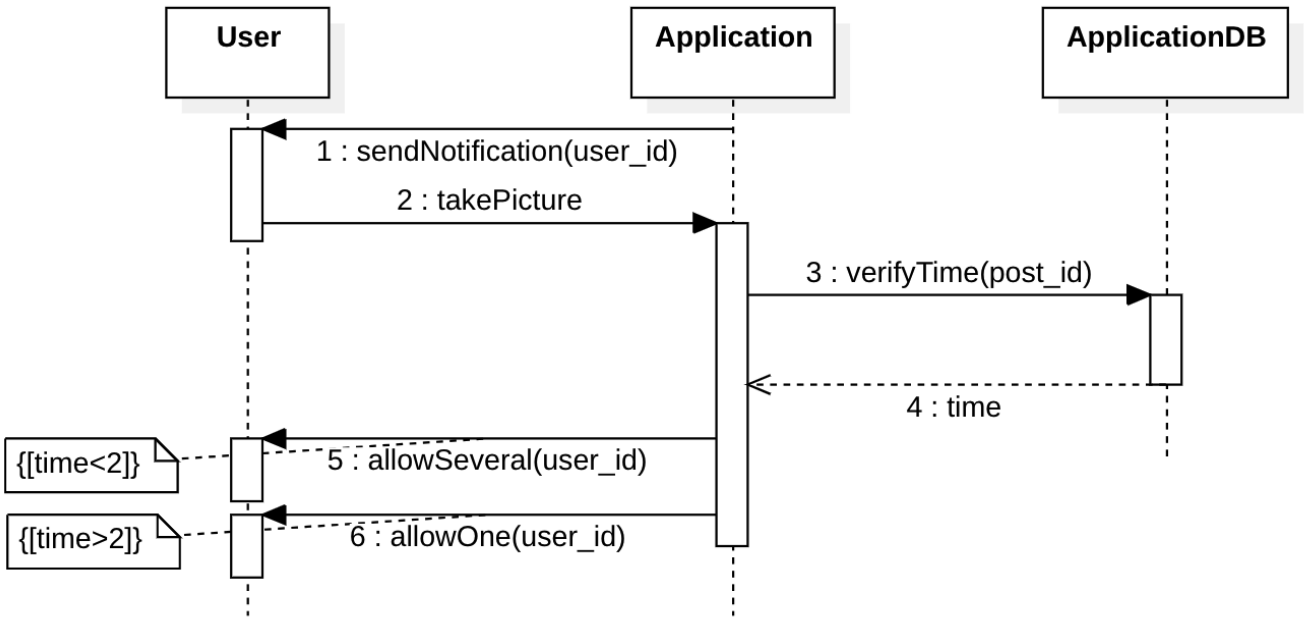

Number	4
Name	Search Friends
Summary	User searches Friends
Priority	3
Preconditions	User has launched an app
Postconditions	User has searched Friends
Primary Actor(s)	User
Secondary Actor(s)	BeReal DB

Number	5
Name	Chat with Friends
Summary	User chats with his Friends
Priority	3
Preconditions	User has launched an app
Postconditions	User has chatted with his Friends
Primary Actor(s)	User
Secondary Actor(s)	BeReal DB

Test Cases (Artemiy Maslov)

Name	TC-1 User posts a BeReal
Requirements	User can post a BeReal
Preconditions	User has downloaded an app and created an account
Steps	1. User receives a notification (Time to BeReal) 2. User taps on notification and opens an app 3. User takes a photo with both cameras 4. Photos are uploaded to DB and are available for other users to observe
Expected Result	User posted a BeReal

Name	TC-2 User comments a post
Requirements	User can comment a post
Preconditions	User posted a BeReal
Steps	1. User taps on a comment section under post 2. User enters a comment and sends it 3. Comment is uploaded to DB and can be seen by other users
Expected Result	User commented a BeReal

Name	TC-3 User reacts to a post
Requirements	User can react to a post
Preconditions	User posted a BeReal
Steps	1. User taps on a reaction section under post 2. User chooses a reaction or creates a new one 3. Reaction is uploaded to DB and can be seen by other users
Expected Result	User reacted to a BeReal

Name	TC-4 User searches Friends section
Requirements	User can search Friends section
Preconditions	User has downloaded an app and created an account
Steps	1. User opens app 2. User taps on Friends menu 3. User browses through suggestions, friend requests or friends 4. In suggestions user can see other recommended accounts 5. In friend request user can see friend requests he received 6. In friends user can see a list of his current friends
Expected Result	User looked through Friends section

Name	TC-5 User chats with friends
Requirements	User can chat with friends
Preconditions	User has downloaded an app and created an account
Steps	1. User opens app 2. User taps on chat icon 3. User chooses which friend he wants to chat with 4. User taps on friend icon and enters a message 5. User sends message 6. A message is processed by DB and shown to another user
Expected Result	User wrote a message to a friend
